 PA - (LIOY) LION CORP
 IC - A23L1/30 ; A61K35/78
 AB - J03004769 Food and drink contains as the active component water-soluble ppte. prepd. by extracting at least one selected from the plants belonging to Solanaceae, Myrtaceae, Anacardiaceae and Caricaceae with a solvent having a specific inductive capacity, gamma, at 20 deg.C of 17.8-37.5.
 - USE/ADVANTAGE - The food and drink contains a component having high ACE inhibition activity originated from natural source and can be used as a functional food in form of drink, flavouring and confectionery for the prevention of hypertension.
 - In an example, 500 ml ethanol is added to 500 g tomato paste and stirred thoroughly and stood at room temp. for 3 hrs. The supernatant is removed by centrifugation and the resultant ppte. is mixed with 10 ml water to give an extract contg. the active component. (5pp Dwg.No.0/0)

- TI - FOOD AND DRINK FOR PREVENTING HYPERTENSION
- AB - PURPOSE: To obtain a food and drink, containing a water-soluble precipitate prepared by extracting a plant of the family Solanaceae, etc., with a solvent having a specific dielectric constant as an active ingredient, having high inhibitory activity against angiotensin converting enzymes and useful for preventing hypertension.
 - CONSTITUTION: The objective food and drink obtained by extracting one or two or more selected from plants (e.g. tomato, papaya, guava or mango) belonging to the families Solanaceae, Myrtaceae, Anacardiaceae and Caricaceae with a solvent (e.g. acetone) having a dielectric constant (γ) of $17.8 < \gamma < 37.5$ at 20 deg.C and blending the resultant water-soluble precipitate as an active ingredient with other ingredients. Furthermore, the dielectric constant (γ) is preferably regulated to $20.5 < \gamma < 24.3$.
